TEMPERING SERVICES, INC.

Raise Your Glass With Excellence

Architectural Decorative Glass

What we offer

The highest quality Decorative Glass products

Glassfab Tempering Services, Inc.

Provides a wide range of exquisite decorative glass options to elevate your design projects. We combine craftsmanship, innovation, and quality to provide you with the finest decorative glass solutions. With customizable options, you can choose from a wide range of patterns, photo-realistic images, and colors to suit your unique vision. Our Spandrel Glass, Silk-Screen Glass, and Digital Printing Glass options are designed to elevate your architectural and design projects, creating a captivating visual experience that showcases your unique style and vision. Let us help you transform spaces into extraordinary works of art with our exceptional decorative glass offerings.

- GTS Inc. warrants its spandrel glass for 5 years from the date of manufacture for use and service under normal conditions.
- For increased accuracy, Glassfab requires Adobe Illustrator (.AI) files when processing Digital Print Orders.
- Spandrel glass must be used in a non-vision application.
- Pricing may vary based on whether the color selected is a Standard Glassfab color or a Custom color.
- For all Digital Print orders, pricing may vary based on artwork and pattern received when ordering.
- Spandrel glass may have inherent pinholes and is not a reason for rejection

Custom Gradient Frit Pattern (Hexagon)

Superior Performance

Spandrel Capabilities: Up To 84" Wide X Up To 152" Tall

How does Spandrel Glass work?

Spandrel glass is a specialized type of glass used in architectural applications, particularly in building facades. It is designed to conceal structural elements, such as columns, beams, and floor slabs, while providing a uniform and aesthetically pleasing appearance to the building exterior.

To achieve the desired opacity, spandrel glass is manufactured by applying a ceramic frit coating to the surface of the glass. This ceramic frit is then fused to the glass through a tempering or heat treatment process, ensuring durability and strength. The ceramic frit coating can be customized to match the desired color and appearance, allowing architects and designers to create a seamless and harmonious look throughout the building facade.

Our Spandrel Glass is specifically designed to enhance privacy and conceal structural elements, making it an ideal choice for commercial buildings and high-rise developments. Available in a variety of colors, our Spandrel Glass seamlessly integrates with the surrounding architecture while maintaining a sleek and sophisticated appearance.

Performance and vibrancy to life with Vibrantz Technologies

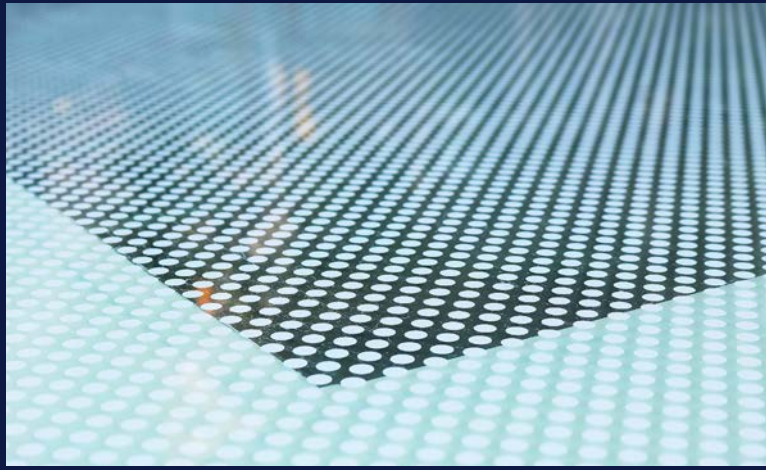

Glassfab is proud to offer custom digital printing to our customers. With our state-of-the-art printing system, we are able to keep up with one of the fastest growing trends in our industry. Our digital printer allows us to reproduce virtually any image or design on glass surfaces for eye catching interior and exterior spaces.

Digital printing can also improve sun control, light diffusion, and light transmission to create beautiful, highly functional environments. We can print on many types of glass, including insulating glass units, laminated glass panels, and fabricated shower door enclosures. It is the perfect option for room dividers, wall cladding, handrails, all glass door entrances, shower enclosures, backsplashes, custom signs and much more.

With a rise in demand for bird friendly glass options, digital print is an excellent solution for dots, lines, and custom bird patterns. These patterns are printed specially to provide birds with a visual reference to help prevent collisions and lower avian mortality, which is estimated to be greater than 100 million birds per year in North America alone.

Vibrantz glass technology is a complete solution consisting of high precision digital glass printers, long lasting and vibrant ceramic inks, and easy to use image processing software. Vibrantz holistic product line enables long-lasting glass durability, specialized ink functionality and enhanced design capabilities.
